```c
#include <stdio.h>
#include <sqlite3.h>

int main() {
    sqlite3 *db;
    sqlite3_stmt *res;
    int rc;

    rc = sqlite3_open("crises.db", &db);
    if (rc != SQLITE_OK) {
        fprintf(stderr, "Cannot open database: %s\n", sqlite3_errmsg(db));
        sqlite3_close(db);
        return 1;
    }

    char id[32];
    printf("Enter the id of the record: ");
    fgets(id, sizeof(id), stdin);

    char sql[256];
    snprintf(sql, sizeof(sql), "SELECT * FROM existential_crises WHERE id = '%s'",

    rc = sqlite3_prepare_v2(db, sql, -1, &res, 0);
    if (rc != SQLITE_OK) {
        fprintf(stderr, "Failed to prepare statement: %s\n", sqlite3_errmsg(db));
        sqlite3_close(db);
        return 1;
    }

    while (sqlite3_step(res) == SQLITE_ROW) {
        int id = sqlite3_column_int(res, 0);
        const unsigned char *name = sqlite3_column_text(res, 1);
        printf("ID: %d | Name: %s\n", id, name);
    }

    sqlite3_finalize(res);
    sqlite3_close(db);
```

**You are now working on Task 1, related to the vulnerability:**
**SQL Injection**

Which line(s) in the code contain the vulnerability?

*Please specify the line number(s). For example: "Line 5" , "Lines 10–12", or "Lines 3 and 7".*

How confident are you in your above answer?

Confidence Level

- Not at all
- Slightly
- Moderately
- Very
- Completely
